HEMP PLASTIC ADJUSTABLE ROLLING MACHINE

**110
mm**

This roller was NOT MADE IN CHINA and is NOT CONVENTIONAL PLASTIC!

You are now the proud owner of a truly unique rolling machine. Sure, others may look similar, but after a month you're left holding a broken mess of parts. Our rollers typically last a lifetime. It's the ultimate in sustainability: a product that sustains itself by simply being well designed, and built to last a lifetime.

This RAW roller is made using specially produced German Hemp Plastic that is then formed through an innovative eco-friendly cold-injection process. Even our rolling aprons use double-thick, high tensile strength vinyl. These rollers are designed to last!

This roller was made on the island of Kudus, in Indonesia. Kudus is known as the place where clove cigarettes were first invented in the 1880's. In Kudus there are still large cigarette factories that employ tens of thousands of people to hand roll cigarettes. In the 1930's, a factory was established to supply the local production facilities with hand rolling machines. This factory is the oldest existing rolling machine producer in the world. We formed a relationship with them in the 1990's, and now we are their biggest customer - thanks to YOU! Our factory knows how to make high-quality rollers that last for tens of thousands of rolls. Sure, we could probably be like everyone else and save a ton of money by making our rollers in China, but quality is more important than cost to both you and us.

*Hemp Plastic was first introduced to Josh in the 1990's at a hemp fair in the UK. It took years for him to convince the German factory to make the first commercial shipment of this material. These rolling machines are some of the world's first items made from the revolutionary material.

INSTRUCTIONS:

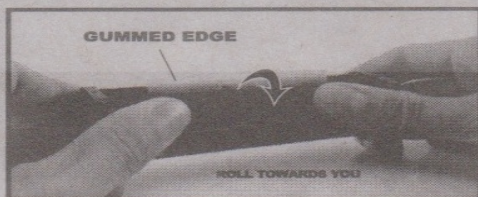

1: Hold the machine with the size control knob on the left. Set knob 1 for Regular size or 2 for Skinny size cigarette.

2: To OPEN the roller, lift the rolling pin up and towards you. Spread the tobacco evenly and lightly press between the rolling pins. Use 1/3 less tobacco for the skinny size cigarette.

3: To CLOSE the roller, push the rolling pins together. Remove any tobacco caught between the rolling pins. With the rolling pins in the closed position, give the front rolling pin one full turn toward you and down with your thumbs. You must always roll toward you never away. One of our staff (looking at you Laura) thought her roller was broken, because she was spinning it the wrong way!

4: INSERT PAPER with the gummed side up and facing you. Roll the front rolling pin towards you again, leaving the gummed edge sticking up by 1/2 inch. Lightly moisten the gummed edge. Continue rolling the paper through the roller by rotating the both rolling pins towards you at the same time. To remove the cigarette, rotate the rear rolling pin quickly backwards. Open & Enjoy!

****When Rolling SKINNY, DO NOT push in at the bottom or the roller will switch back to REGULAR!****
