

Quick Start Manual

1. Switch on.
2. Use “+” and “-” to choose the optimal temperature.
3. Grind herbs.
4. Load vapor whip. Load maximum of 3mm-6mm (1/8in-1/4in) of herbs.
5. Insert vapor whip into heating chamber. Insert ONLY 95% of vapor whip into heating chamber to avoid getting stuck. If your vapor whip gets stuck, pull straight back. Do not use twisting motion or parts may become damaged.
6. Point vapor whip to an empty container or trash can and exhale to discard old vaporized herbs. If herbs contents are stuck due to not discarding herbs while heated, then reheat herbs by inserting into heating chamber and inhaling. The heat will cause the herbs to loosen up.
7. Cool down unit before shutting off power.
